

SPECIALIST IN
**LARGE LASER CUTTING
AND FOLDING**

Folsana
Working Steel Harder

Company

Established in 1979, Folsana Pressed Sections Ltd is a family-owned ISO 9001 2008 accredited company and our UK based facility in Bolton supports the local community through employment.

The staff on our production floor are dedicated, highly skilled personnel with many years of experience in the manufacturing industry.

We foster initiative and innovation in the workplace by giving each of our team members individual areas of responsibility, and we support young local people through our in house traineeship scheme.

Folsana has forged its reputation in both the UK and European markets by delivering quality metal components and fabricated parts for more than three decades.

Our technical expertise in advanced laser cutting and folding sets us apart from other local engineering firms, allowing us to deliver highly accurate, cost-efficient solutions for literally any project specification.

This precision of workmanship means Folsana is a preferred provider to a number of blue chip companies within a vast array of industries.

We have long-standing relationships with our clients because we maintain a strong focus on customer satisfaction and add value to their production process.

Technical excellence and superior service are the cornerstones of every Folsana job. You will see this for yourself when you choose to deal with us.

As a result, your organisation is able to free up its own labour resources and invest money in the things your business does best.

Mission statement

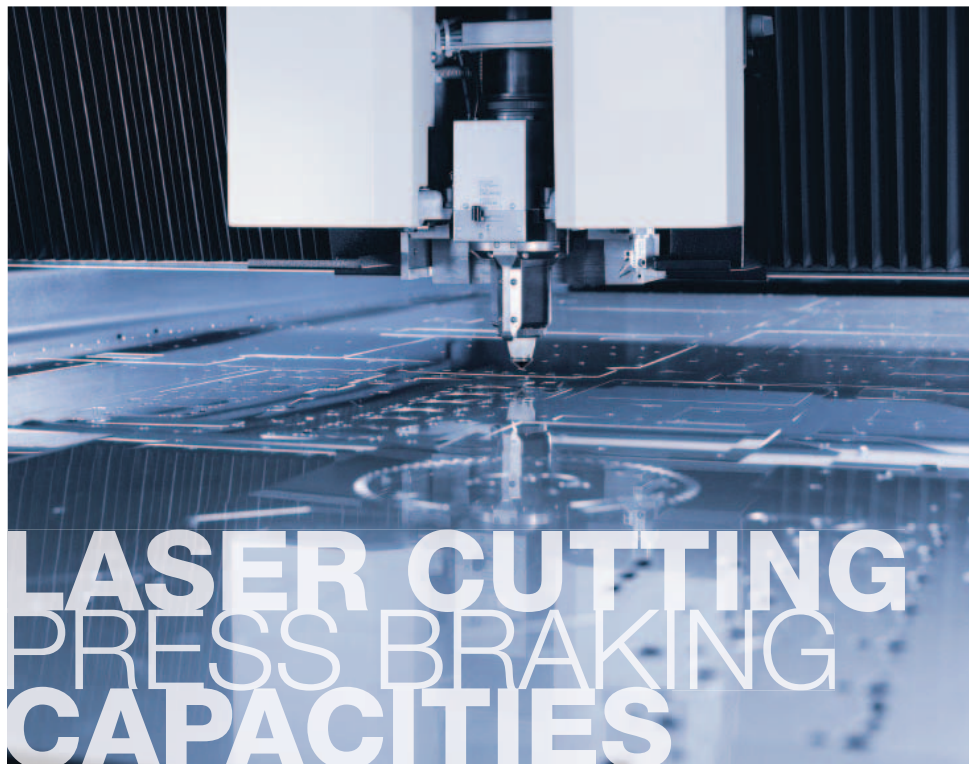

“ We will offer the highest standards of technical excellence in the manufacturing and supply of metal components and parts.

We will draw on our extensive experience in the industrial design field to ensure tailor-made solutions for each project we undertake.

We will utilise state-of-the-art technology and advanced quality control policies to deliver to our clients the most appropriate and cost-effective solutions available in the marketplace.

We will remain proactive in meeting the needs of our clients, and we will operate with the utmost integrity and honesty.

We will provide a safe and friendly working environment for our staff, and encourage individual employees to develop their technical skills and personal values. ”

Laser Cutting

Our new generation laser cutting machines give us exceptional laser cutting capabilities for cutting intricate shapes across a broad range of materials. From high volume to one off prototype parts, the machines are designed for speed, accuracy and fast set-up times.

With the latest software, we can rapidly convert your drawing or file and nest your parts for the most efficient sheet use, saving you money.

Folsana's laser cutting machines are also a viable alternative to traditional guillotines and punches, although we still offer these services. Our equipment accommodates sheet sizes up to 8000mm x 2500mm x 25mm thick, delivering precision stainless steel aluminium and steel cutting at rapid rates, dramatically reducing the labour and tooling costs associated with conventional methods.

Our advanced laser cutting equipment is technically superior and delivers components with unsurpassed dimensional accuracy and repeatability.

Our design team can discuss with you ways to take advantage of the accuracy of laser cutting by adding location tabs and keys to make assembly easier and more accurate. Parts can be etched with assembly instructions to eliminate mistakes or etched with serial numbers for traceability.

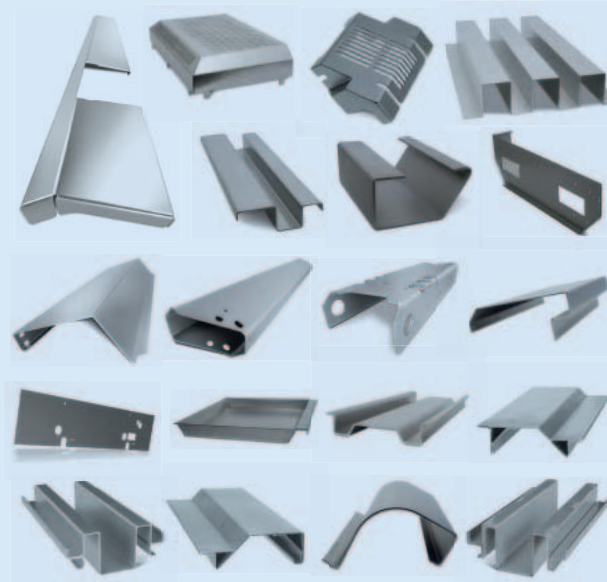

Talk to us today about the advantages of high speed laser cutting for your business.

Press Brake

Through the use of the best available technology in the UK market, Folsana provides CNC press brake metal folding up to 10600mm with unrivalled speed, precision and repeatability.

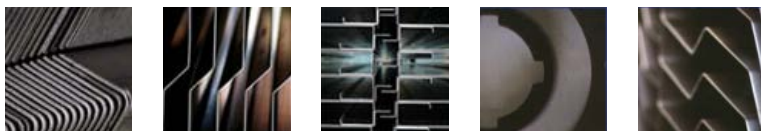

This superior press brake equipment is the perfect complement to our advanced laser cutting technology, and allows us to provide full service solutions where state-of-the-art manufacturing methods are required.

Folded up to 10.6m long

Interesting Fact

LASER - which stands for Light Amplification by Stimulated Emission Radiation - was invented in the 1960s. Due to its purity and coherence of light, laser remains the most precise cutting technology known to man. It can be focussed to diameters of 0.1mm and produces surface temperatures exceeding 13,000 degrees Celsius and produces little to no heat affected cut zone.

Fabrication

Folsana is renowned for the quality of its fabrication work, and is experienced in a multitude of applications. Our company's strong reputation in this area stems from our ability to view any given project in its entirety and to assess where cost advantages can be gained.

We place an emphasis on repeatability of fabrication, and our highly trained and experienced personnel remain focussed on each project from start to finish.

Our automated laser cutting and press brake technology, allows us to produce large quantities of identical fabricated parts, with the added bonus of fast turnaround.

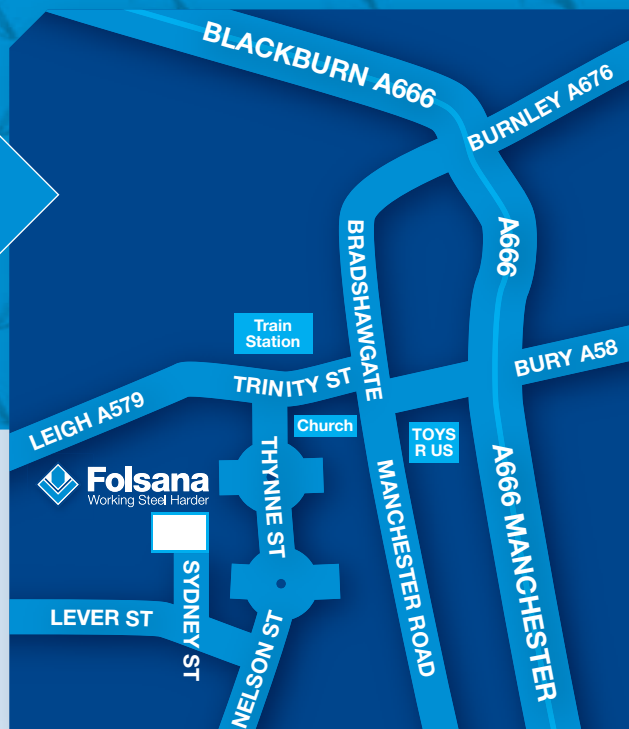

Supplying Global Industries

Directions to Folsana

From J3 M61, J15 M62/M60

- ▲ Proceed to the A666
- ▲ Leave at the 3rd exit, turn left - Toys R Us on the left
- ▲ At the next set of lights, turn right - keep to the left
- ▲ Turn left at the next lights into Trinity Street
- ▲ At the next lights, turn left into Thynne Street
- ▲ Go straight across 2 islands, then take the 1st right into Lever Street
- ▲ Take the 1st right into Sidney Street
